

LP Management Services, Inc.

Specializing in Safety, Health and Risk Management Consultation

Comprehensive Facility Safety Assessment

Our comprehensive facility safety assessment will focus on the loss prevention policies, employee/vendor work practices, and the physical state of the facility. The safety assessment includes a complete walkthrough of electrical & mechanical areas within facilities as well as review of safety procedures and associated documentation. This will allow us to provide an overall assessment of the client's safety and loss prevention program. Recommendations will be based on regulatory requirements, consensus standards, internal company policies, manufacturer's recommendations and industry best practices.

A benchmark of your safety and loss prevention program will provide the means to set measurable objectives for completion within the safety program. It will also offer direction in the development of a training plan for employees.

A comprehensive assessment report is provided to the client to act as a living document to track progress into the future.

Consultants will work with designated personnel post assessment to address any non-compliance issues and ensure that all existing safety concerns are remedied.

Duration: Determined by Size of Location & Client's Needs
